## PROGRAM 1: INSURANCE DATABASE

Consider the Insurance database given below. The data types are specified.

PERSON (driver\_id: String, name: String, address: String)

CAR (reg\_num: String, model: String, year: int)

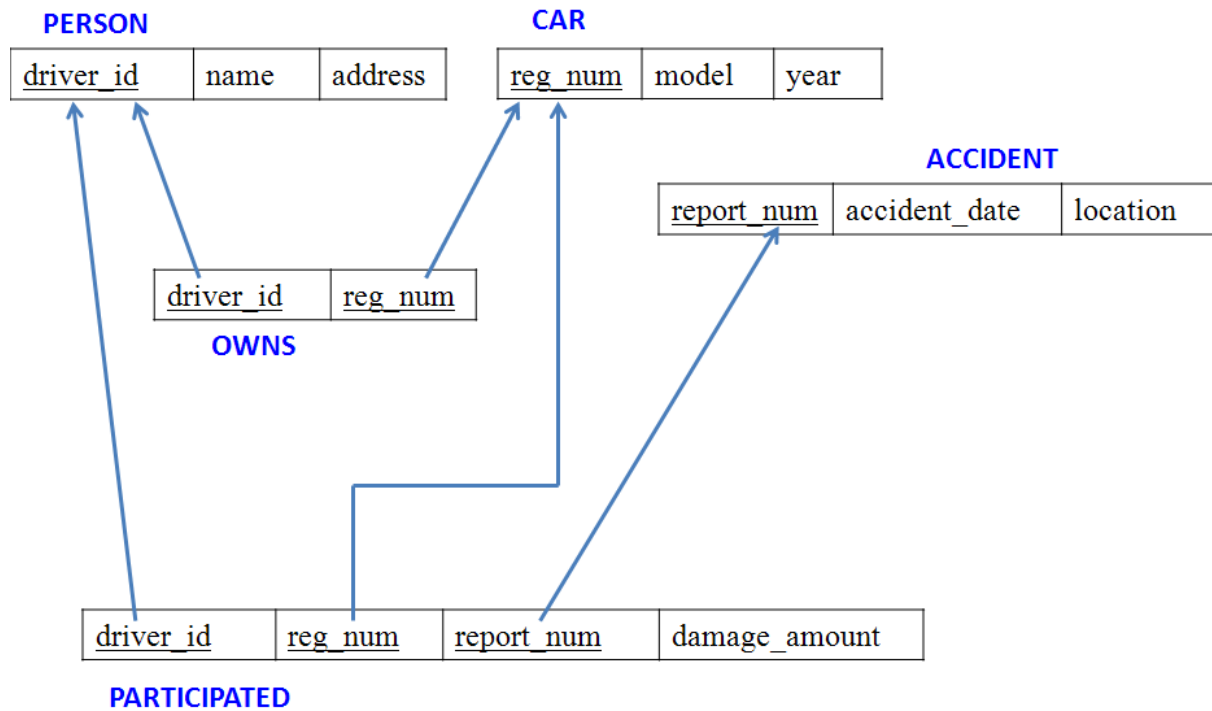

ACCIDENT (report\_num: int, accident\_date: date, location: String)

OWNS (driver\_id: String, reg\_num: String)

PARTICIPATED (driver\_id: String, reg\_num: String, report\_num: int, damage\_amount: int)

- i) Create the above tables by properly specifying the primary keys and the foreign keys.
- ii) Enter at least five tuples for each relation.
- iii) Demonstrate how you
  - a. Update the damage amount to 25000 for the car with a specific reg-num (example 'KA053408') for which the accident report number was 12.
  - b. Add a new accident to the database.
- iv) Find the total number of people who owned cars that involved in accidents in 2008.
- v) Find the number of accidents in which cars belonging to a specific model (example ) were involved.

**BankCustomer** (customer-name: String, customer-street: String, customer-city: String)

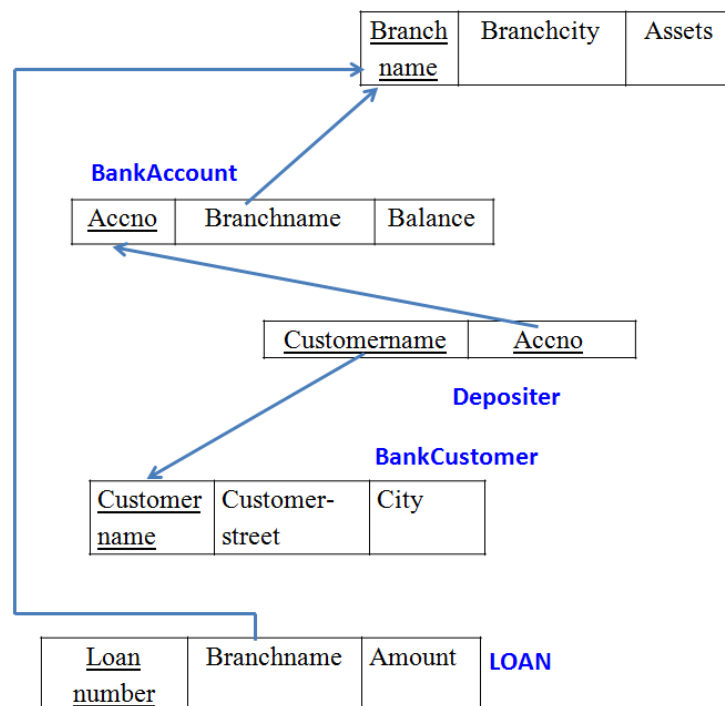

**Depositer**(customer-name: String, accno: int)

**Loan** (loan-number: int, branch-name: String, amount: real)

- Create the above tables by properly specifying the primary keys and the foreign keys.
- Enter at least five tuples for each relation.
- Find all the customers who have at least two accounts at the *Main* branch (ex. SBI\_ResidencyRoad).
- Find all the customers who have an account at *all* the branches located in a specific city (Ex. Delhi).
- Demonstrate how you delete all account tuples at every branch located in a specific city (Ex. Bombay).

**INTRODUCTION:** This database is developed for supporting banking facilities. Details of the branch along with the accounts and loans handled by them are recorded. Also details of the depositors of the corresponding branches are maintained.

### PROGRAM 3: SUPPLIER DATABASE

Consider the following schema:

**SUPPLIERS**(sid: integer, sname: string, address: string)

**PARTS**(pid: integer, pname: string, color: string)

**CATALOG**(sid: integer, pid: integer, cost: real)

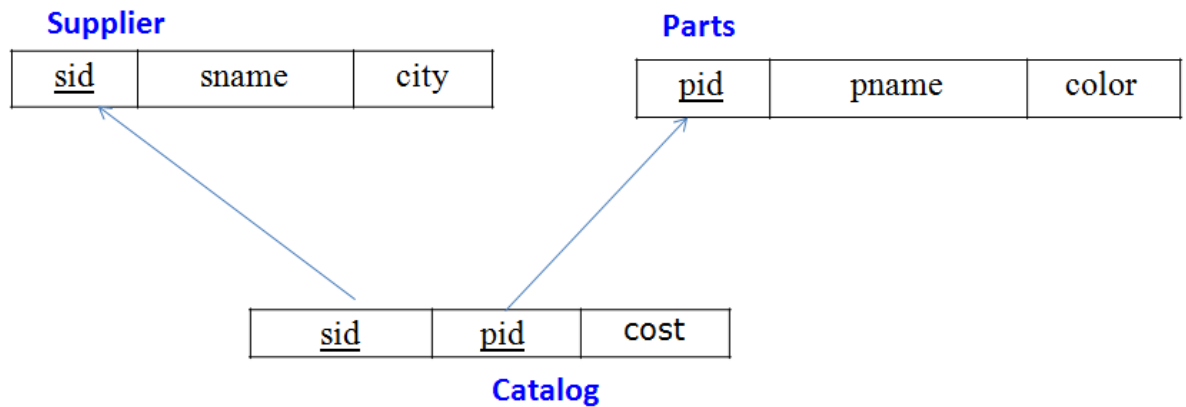

The Catalog relation lists the prices charged for parts by Suppliers.

Write the following queries in SQL:

- Find the pnames of parts for which there is some supplier.
- Find the snames of suppliers who supply every part.
- Find the snames of suppliers who supply every red part.

- iv) Find the pnames of parts supplied by Acme Widget Suppliers and by no one else.
- v) Find the sids of suppliers who charge more for some part than the average cost of that part (averaged over all the suppliers who supply that part).
- vi) For each part, find the sname of the supplier who charges the most for that part.

## PROGRAM 4: STUDENT FACULTY DATABASE

**Consider the following database for student enrollment for course :**

**STUDENT**(snum: integer, sname: string, major: string, lvl: string, age: integer)**CLASS(cname: string, meets at: time, room: string, fid: integer)****ENROLLED**(snum: integer, cname: string)**FACULTY(fid: integer, fname: string, deptid: integer)**

The meaning of these relations is straightforward; for example, Enrolled has one record per student-class pair such that the student is enrolled in the class. Level(lvl) is a two character code with 4 different values (example: Junior: JR etc)

**Write the following queries in SQL. No duplicates should be printed in any of the answers.**

- i. Find the names of all Juniors (level = JR) who are enrolled in a class taught by

- ii. Find the names of all classes that either meet in room R128 or have five or more Students enrolled.
- iii. Find the names of all students who are enrolled in two classes that meet at the same time.
- iv. Find the names of faculty members who teach in every room in which some class is taught.
- v. Find the names of faculty members for whom the combined enrollment of the courses that they teach is less than five.
- vi. Find the names of students who are not enrolled in any class.
- vii. For each age value that appears in Students, find the level value that appears most often. For example, if there are more FR level students aged 18 than SR, JR, or SO students aged 18, you should print the pair (18, FR).

## PROGRAM 5: AIRLINE FLIGHT DATABASE

**Consider the following database that keeps track of airline flight information:**

**AIRCRAFT(aid: integer, aname: string, cruisingrange: integer)****CERTIFIED(eid: integer, aid: integer)****EMPLOYEES(eid: integer, ename: string, salary: integer)**

**Note that the `Employees` relation describes pilots and other kinds of employees as well;**

**Every pilot is certified for some aircraft, and only pilots are certified to fly.**

**Write each of the following queries in SQL.**

- i. Find the names of aircraft such that all pilots certified to operate them have salaries more than Rs.80,000.
- ii. For each pilot who is certified for more than three aircrafts, find the eid and the maximum cruisingrange of the aircraft for which she or he is certified.
- iii. Find the names of pilots whose salary is less than the price of the cheapest route from Bengaluru to Frankfurt.
- iv. For all aircraft with cruisingrange over 1000 Kms, find the name of the aircraft and the average salary of all pilots certified for this aircraft.

- v. Find the names of pilots certified for some Boeing aircraft.
- vi. Find the aids of all aircraft that can be used on routes from Bengaluru to New Delhi.

## Program 6 : Order Database

Consider the following schema for Order Database:

**SALESMAN** (*Salesman\_id*, Name, City, Commission)

**CUSTOMER** (*Customer\_id*, Cust\_Name, City, Grade, Salesman\_id)

**ORDERS** (*Ord\_No*, Purchase\_Amt, Ord\_Date, Customer\_id, Salesman\_id)

Write SQL queries to

1. Count the customers with grades above Bangalore's average.
2. Find the name and numbers of all salesmen who had more than one customer.
3. List all salesmen and indicate those who have and don't have customers in their cities (Use UNION operation.)
4. Create a view that finds the salesman who has the customer with the highest order of a day.
5. Demonstrate the DELETE operation by removing salesman with id 1000. All his orders must also be deleted.

iii. Demonstrate how you add a new text book to the database and make this book be adopted by some department.

iv. Produce a list of text books (include Course #, Book-ISBN, Book-title) in the alphabetical order for courses offered by the 'CS' department that use more than two books.

- v. List any department that has all its adopted books published by a specific publisher.
- vi. Generate suitable reports.

vii. Create suitable front end for querying and displaying the results.
